MONTHLY MONITORING REPORT

Monthly Storefront Monitoring & Maintenance Report

Integrity Reforestation — November 2026

Prepared by WebDesk Solution Maintenance & QA Team

https://test-demo-store-801srwej.myshopify.com

EXECUTIVE SUMMARY

November 2026 Monitoring Overview

During the November 2026 monthly monitoring cycle, we reviewed App and Dashboard server performance, performed build cache maintenance on both environments, and reviewed operational metrics for the past 30 days. We audited Craft (v16.1.0), which is currently active on this store. We also completed end-to-end read-only testing of the Custom Admin Dashboard. The development team added a Resend Email option for failed emails in the Email Logs module.

MONTHLY APP & SERVER MONITORING

Overview

OPTIMIZATIONS & CHECKS REVIEWED

1. Reviewed server performance and resource utilization for the App and Dashboard environments
2. Reviewed and performed build cache maintenance for both environments
3. Monitored application response times, throughput, and memory usage
4. Reviewed application usage and performance data for the past 30 days
5. Checked the overall application stability and operational status

OBJECTIVES

1. Maintain application stability and performance
2. Monitor server resource utilization and identify potential performance issues
3. Clear build cache data and verify application behavior after maintenance
4. Identify errors or operational issues requiring follow-up

MONTHLY APP & SERVER MONITORING

Performance Metrics

APP SERVER

Response Time	9 ms
Throughput	< 1 RPS
Memory Usage	17%

- ✓ The App server recorded a response time of 9 ms in the provided monitoring data.
- ✓ Throughput remained below 1 RPS.
- ✓ Memory utilization was 17%.
- ✓ No application errors were reported in the provided monitoring findings.

View metrics dashboard

DASHBOARD SERVER

Response Time	1 second (1,000 ms)
Throughput	< 1 RPS
Memory Usage	15%

- ✓ The Dashboard server recorded a response time of 1 second in the provided monitoring data.
- ✓ Throughput remained below 1 RPS.
- ✓ Memory utilization was 15%.
- ✓ No application errors were reported in the provided monitoring findings.

View metrics dashboard

✓ Both environments showed low memory utilization and throughput below 1 RPS. The App server response time was 9 ms, while the Dashboard server response time was 1 second. Dashboard response time should continue to be monitored during future checks.

INFRASTRUCTURE SECURITY

SSL Certificate & Domain Security

SSL CERTIFICATE STATUS

Active & Secure

- Certificate covers: *.herokuapp.com
- Issued by: Amazon RSA 2048 M01
- Issued on: October 26, 2026
- Expires on: May 11, 2027 (195 days from today)

Read live from the dashboard host during this audit run (not from the dev team text). The wildcard certificate covers the herokuapp.com domain.

MONTHLY APP & SERVER MONITORING

Build Cache Analysis

APP SERVER

BEFORE
View evidence

AFTER
View evidence

DASHBOARD SERVER

BEFORE
View evidence

AFTER
View evidence

FINDINGS

- Reviewed the build cache status for both App and Dashboard environments.
- Performed cache maintenance and reviewed the results using the before-and-after screenshots.
- No cache-related issues were reported during the current review.
- Application behavior after cache maintenance should continue to be monitored during subsequent deployments.

✓ **Build cache maintenance was performed for both environments, with no issues reported during verification.**

MONTHLY APP & SERVER MONITORING

Last 30 Days Usage

APP SERVER

View usage evidence →

DASHBOARD SERVER

View usage evidence →

FINDINGS

- Reviewed the provided App and Dashboard performance screenshots covering the past 30 days.
- The App server recorded a response time of 9 ms.
- The Dashboard server recorded a response time of 1 second.
- Throughput was below 1 RPS for both environments.
- App memory utilization was 17%, while Dashboard memory utilization was 15%.
- No errors were reported in the provided monitoring findings.

✓ The 30-day monitoring review showed low memory utilization and throughput below 1 RPS in both environments. Continue monitoring Dashboard response time and overall application performance.

MONTHLY APP & SERVER MONITORING

Overall Summary

Area	Status	Remarks
App Server Response Time	✓ Monitored	9 ms
Dashboard Response Time	✓ Monitored	1 second
App Memory Usage	✓ Monitored	17%
Dashboard Memory Usage	✓ Monitored	15%
App Throughput	✓ Monitored	< 1 RPS
Dashboard Throughput	✓ Monitored	< 1 RPS
App Build Cache	✓ Reviewed	Maintenance performed; no issues reported
Dashboard Build Cache	✓ Reviewed	Maintenance performed; no issues reported
Application Errors	✓ No Errors Reported	Based on the provided monitoring findings
Monitoring Period	✓ Reviewed	Past 30 days

MONTHLY APP & SERVER MONITORING

Final Assessment

SUCCESSFUL OUTCOMES

- ✓ Reviewed performance metrics for both App and Dashboard environments.
- ✓ Reviewed the available 30-day monitoring data.
- ✓ Recorded App response time of 9 ms and Dashboard response time of 1 second.
- ✓ Observed memory utilization of 17% for the App and 15% for the Dashboard.
- ✓ Reviewed build cache maintenance for both environments, with no issues reported.
- ✓ No application errors were reported in the provided findings.

AREAS FOR CONTINUED MONITORING

- Continue monitoring response times, particularly for the Dashboard server.
- Review application performance and resource utilization during future monthly cycles.
- Continue monitoring build cache behavior after deployments.
- Investigate any errors or unusual performance changes if they arise.

DEVELOPMENT & STOREFRONT MAINTENANCE UPDATES

Monthly Development Work Completed

Development work completed this month, as reported by the development team.

Custom App Dashboard

Resend Email option for failed emails

Added a Resend Email option for failed emails in the Email Logs module. The resending was implemented and verified, and a test email confirmed it works as expected.

Client impact: Failed notification emails can be sent again from the dashboard.

THANK YOU
