WEBDESK SOLUTION®

MONTHLY WEBSITE HEALTH & MAINTENANCE

Website Health & Monthly Maintenance Report

Our Green House | www.ourgreenhouse.com

Reporting month: October 2026

Prepared by WebDesk Solution | webdesksolution.com

This month at a glance

378
Navigation pages checked for availability

8
Customer journeys reviewed

3
Screen sizes reviewed (desktop, tablet, mobile)

19
Pages sampled for SEO and content structure

23
Observations documented for follow-up

4
Critical or high-priority issues found

Reviewed this month: functionality, user experience, responsive layout, technical health, SEO, performance, integrations and safe security checks. The same areas were reviewed in September, when 32 observations were documented.

Website health & stability

Availability

All 378 pages linked from the main navigation loaded successfully, with no server errors observed.

Navigation

Header, menus and footer links were reviewed, including 3 pages that redirect to their current versions.

Search

Valid, partial, no-result and unusual searches were all handled gracefully.

Error handling

A missing page correctly shows a friendly "not found" page.

Cart & checkout

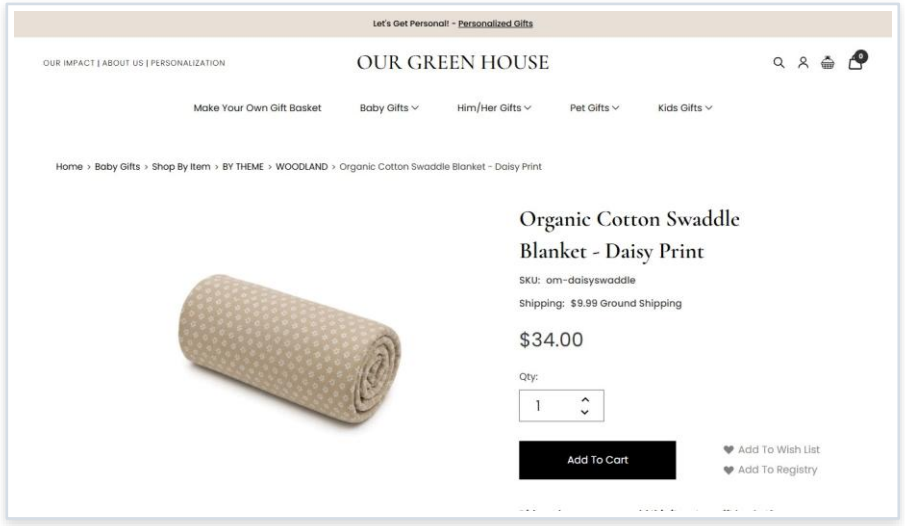

Adding, changing and removing items worked, with correct totals.

Sign-in

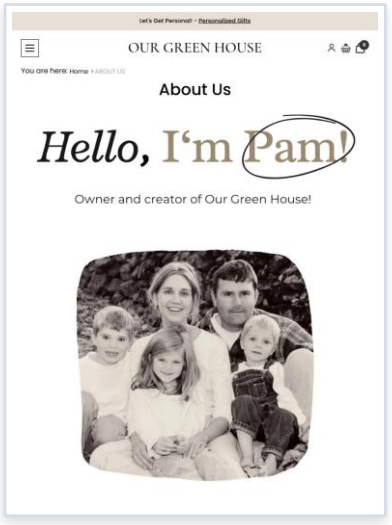

Empty and invalid sign-in details produce clear, helpful messages.

Key journeys were reviewed to help maintain reliable day-to-day operation.

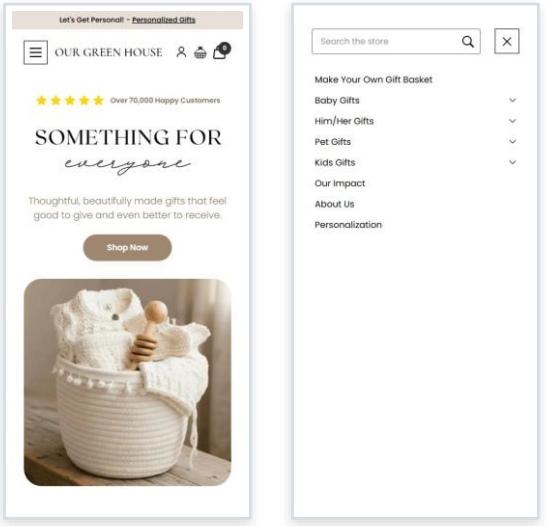

Experience across devices

Desktop

Tablet

Mobile

Tested in a Chrome-based browser. Other browsers are recommended for next month.

- Layouts adapt cleanly at desktop, tablet and mobile sizes, with no sideways scrolling.
- Mobile menu, cart and product pages remain easy to use.
- Buttons, forms and calls to action were reviewed for consistent behaviour.
- The gift-basket builder works on mobile.

Business-critical journeys reviewed

Discover

Search and category browsing

Choose

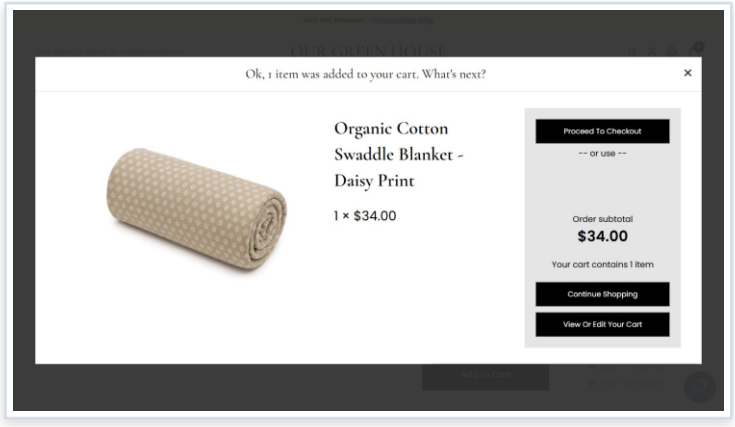

Product pages and the Make Your Own Gift Basket builder

Cart

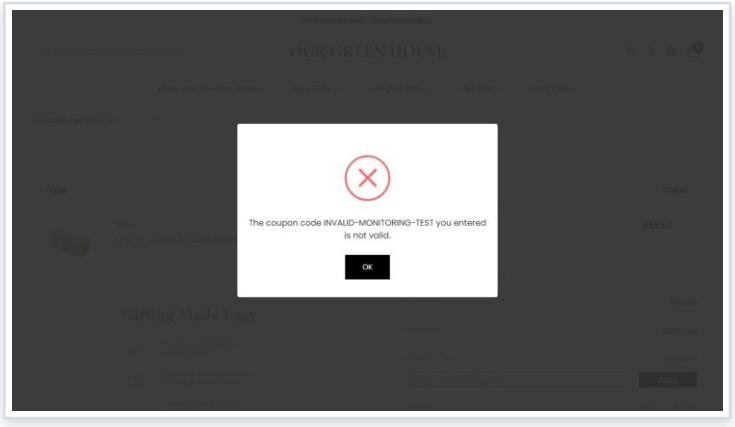

Add, update quantity, remove, coupon check

Checkout

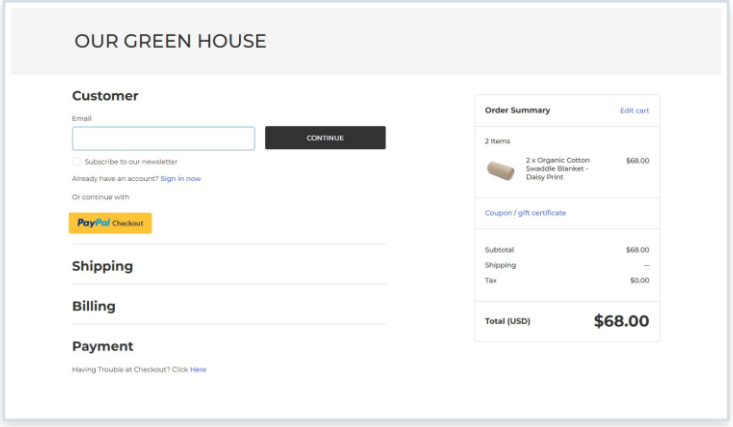

Reviewed up to the payment boundary

Add to cart

Invalid coupon message

Guest checkout

The customer journey from product discovery through checkout was reviewed, with payment submission excluded from the live store. Contact and newsletter form submissions were also excluded to avoid sending real communications.

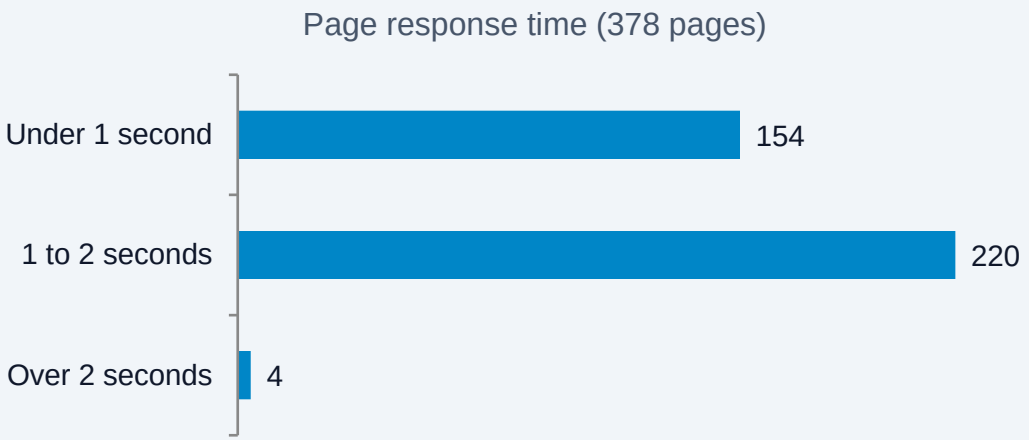

Technical health monitoring

Technical check	What it means for you
Website pages and redirects	Helps confirm visitors reach the right page without errors
Browser activity and script behaviour	Helps spot issues that can quietly affect page features
Network and service responses	Helps identify potential integration interruptions early
Third-party tools (analytics, ads, chat, video)	Confirms marketing and support tools are loading as expected
Error pages and invalid addresses	Supports a smooth experience when a link is mistyped
Secure connection (HTTPS)	Helps protect visitors and their data in transit

Some technical items were noted for follow-up and are listed on the Issues & Improvements slide.

Performance & SEO health

Performance health reviewed

- Layout stability on the homepage measured at 0.020 (no unexpected shifting).
- Homepage full load took about 5 seconds in a single test run, which is acceptable; the main content appears sooner.
- The main content of the homepage appeared in about 1.4 s on desktop.

SEO health reviewed

- Search-engine files (robots.txt and sitemap) are in place and valid
- 2 sampled pages missing canonical addresses or social sharing tags
- Structured data present (organisation, product, breadcrumbs)
- No pages blocked from search engines in the sample
- 3 of 19 sampled pages have no meta description
- A few pages have missing or repeated headings

Amber items are recommendations, not confirmed problems for visitors.

Security & website protection

Routine, non-destructive security checks were performed across observable website behaviour.

Observed in good order

- Secure connection (HTTPS) active; visitors on the plain-web address are redirected to it
- No insecure content found loading on the pages checked
- Unusual characters typed into search were not displayed back unsafely
- Sign-in and checkout forms validate input and show clear messages

Recommended hardening

- Strengthen the browser security settings the site sends (for example, enforce secure connections for returning visitors)
- Add optional extra privacy and protection headers
- Update an older script library (jQuery) that has known security notices
- Add email sender protection (DMARC and DKIM records) so the shop's emails are trusted

Maintenance activities completed

Website

- Functional health review
- Navigation review
- Sign-in and checkout validation checks
- Link availability checks (378 pages)

Technical

- Browser and script monitoring
- Network and service checks
- Third-party tool review
- Resource loading review

Experience

- Desktop, tablet and mobile review
- Layout consistency
- Mobile menu and cart usability
- Basic accessibility checks

SEO & performance

- Search-engine file review
- Page title and description review
- Structured data check
- Page speed observations

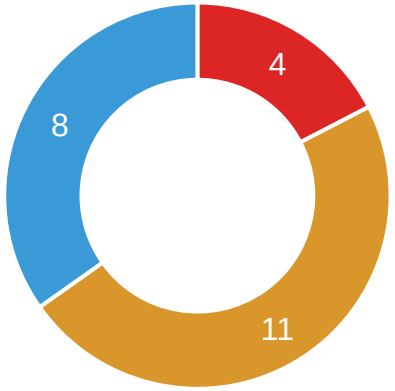

Preventive

- Baseline established for future comparison
- Safe security observations
- Test data cleaned up after review
- Follow-up list prepared

Not part of this review

Live payments, backups, updates and form submissions were outside this month's scope.

Issues & improvements

23 observations

4 high-priority items are included in the table below. No changes were applied to the live site during this review, so items below are open and documented for follow-up.

Area	Finding	Status	Client value
Security settings	Some browser protection settings and older scripts need attention	Recommended	Stronger protection for visitors
Page speed	A few pages were slower to respond in testing	Monitor	Faster experience, better search ranking
Email settings	Email sender protection records are missing	Recommended	Shop emails are more likely to reach the inbox
Accessibility	Some labels, link text and colour contrast need attention	Recommended	Easier for all visitors to use
Search metadata	Some pages lack descriptions or clear headings	Recommended	Clearer listings in search results

Addressed this month: none applied (review only). Full details are in the internal audit.

Monthly health summary

Website availability

Healthy

All 378 checked pages loaded

Functionality

Healthy

Core journeys work; builder has minor script errors

UI / UX

Healthy

Consistent; small accessibility points noted

Responsive experience

Healthy

Desktop, tablet and mobile reviewed

Technical health

Needs attention

Some configuration items to tidy

Performance

Healthy

Pages respond quickly

SEO

Needs attention

Metadata gaps on some pages

Integrations

Healthy

Third-party tools loading as expected

Security checks

Needs attention

Hardening recommended

Statuses reflect this month's review only. Other browsers, forms and payments were not tested.

Next month: continuous care

Continuous monitoring helps identify functional, technical, performance and user-experience issues early, supporting a stable and reliable website.

- **Business-critical journeys**
- **Responsive experience**
- **Performance**
- **SEO health**
- **Integrations**
- **Security observations**
- **Follow-up on this month's findings**
- **New website changes**

Recommended next: browser testing beyond Chrome, and checkout validation in a safe test environment.
