Server Performance

# Server Memory and Log Optimization

This work covers the PartsConnexion server, which also serves AudioConnexion.

## Server memory

**Healthy**

Server memory use stayed steady at about 25% this month, well within normal limits.

- No unusual spikes were detected.
- No sign of memory leaks.
- Resources stayed within expected limits.

Evidence: https://app.screencast.com/ewttZ7RRhBB25

## Server logs

**Improved**

The server recorded far more log entries than were useful, which made problems harder to find and slowed troubleshooting. Logs are now cleaner, shorter and easier to read.

- Less noise in the logs
- Clearer, easier-to-read entries
- Faster to find a problem
- Better visibility of how the store is running
